

The Apk for this App is temporarily unavailable. Here are sample screenshots of it in action.

GALLERY TAB

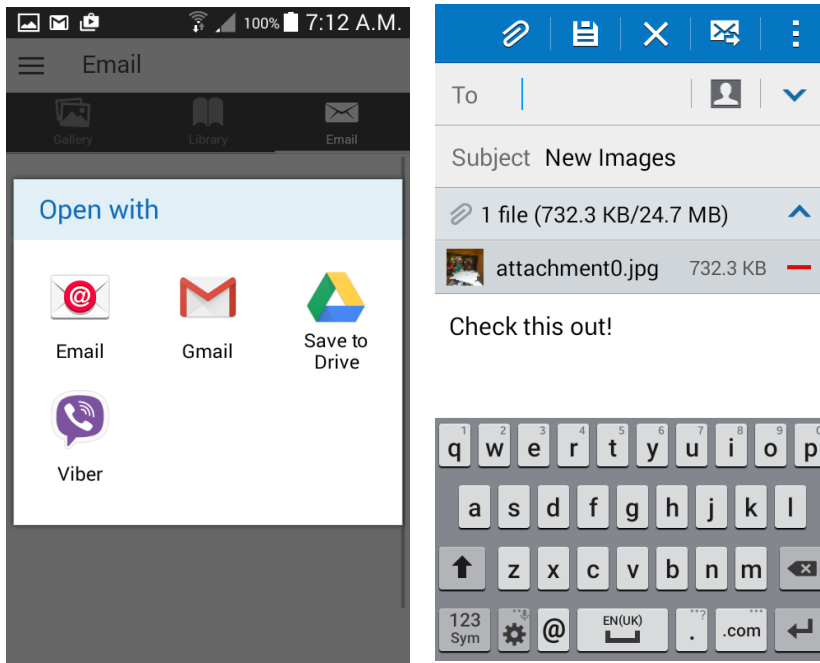

This is my Opening page. It hosts the Gallery populated by images taken by Camera app. This view slides right to reveal sidemenu to left. Also sidemenu is shown when the 3 stacked lines to left of word 'Gallery' is clicked.

The camera icon in footer when clicked brings up a dialogue (Actionsheet) to either take photo or select photo from library. Both methods populate the page with vertically scrollable cards containing the images when either option is clicked. (The images and data persists through app restarts.) This in turn brings up a dialog for user input in the form of giving a title and description to your image taken. Upon user inputting name for title and description and clicking OK the data is saved below image on card in Gallery display as shown in 4th image.

EMAIL TAB: The email tab has a send email button. It can be clicked once picture is taken and in Gallery. It offers options of email services dependant on users phone.

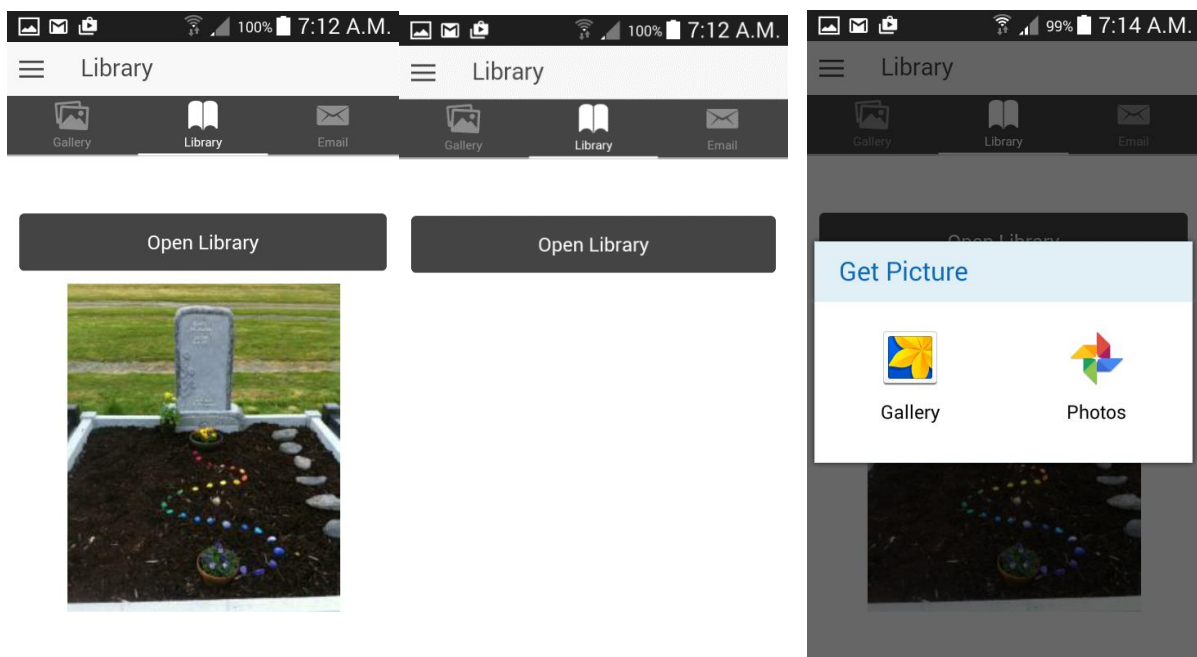

This is the dialog that is shown when send Email button is clicked in email tab.

This is the view once email is selected with automatic attachment and custom message in email body for pic taken.

LIBRARY TAB: This is the view of library tab with OPEN Library button

When the Open Library button is clicked we get access to Phones image Library. We can select picture of choice to populate the view.

SIDEMENU VIEW: This is the Menu view with access to Gallery, Library and Email tabs/pages.
